

Palm Sized Health Assistant
By EDoc Medical services Pvt Ltd

Why P-SHA

- After a certain age patients need continuous monitoring and health advice.
- A continuous guide and feedback about the basic fitness practices like –
 - Every guided meditation
 - Exercise,
 - Reminders to drink water,
 - sleep early, wake-up early etc is an important requirement in this era of technology.
- An emergency system that could call for help when needed without the need of human intervention

Features

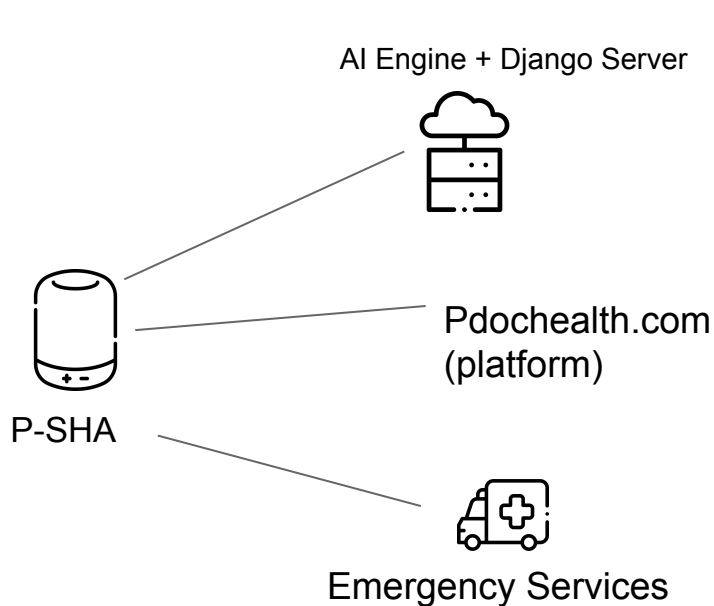

P-SHA is a complete healthcare solution in the form of a bot driven by the state of the art AI.

P-SHA can :

1. Address patients and their complains, analyze their problem and provide solutions to simple issues, otherwise raise request to the PDoc health platform to book appointments at doctors on confirmation.
2. Detect simple health issues like people sneezing, coughing, snoring etc and provide solutions to those problems (only if not serious according to analysis)
3. Guide users to meditate, perform exercise, sleep better etc in realtime.
4. P-SHA can also detect serious and urgent requests like to call an ambulance, a doctor or an emergency contact immediately.
5. When given enough information about a particular patient P-SHA continuously asks corresponding questions to monitor the patient and sends statistics to their concerned ones.

Note : P-SHA doesn't replace doctors , it simply is a friendly health monitoring bot that can detect simple conditions and guide towards

Technology behind P-SHA

AI Engine

Employment Opportunities

A team of 4 is already working on developing a POC of P-SHA. Once the prototyping is done a large group of people will be hired with skills in embedded systems and electrical knowledge. This mass of people do not need Bachelor degrees etc but anybody with the skill can excel at the task of repeating the design thereby creating a large vacancy for skilled labor.

Apart from that for continuous monitoring ,research and management another group of candidates with respective field of studies will also be hired to further make developments possible.

Conclusion

AI is taking over every industry, it is now time for fitness and healthcare.

Moreover India is still trying to compete in the international market with AI products because it is the **next thing**.

Being healthy is no effort, we just need someone who “knows” to guide us. Why not an AI then?
